

Top 10 Reasons Why You Need EMC NetWorker

Join the EMC NetWorker Online Community to meet fellow users and share best practices.

- 1 If your backups don't recover, neither will your business.**
EMC® NetWorker® is the leader in recovery performance—up to 100 percent faster than alternatives. It delivers fast, secure, and reliable recovery to ensure you meet required service levels and keep your business running.
- 2 Your backup windows have closed.**
With NetWorker you can move beyond tape—to disk backup, deduplication, and snapshot technologies to significantly speed backup, reduce impact and meet your most aggressive RTO and RPO requirements.
- 3 It's time to drive the costs out of your backup operation.**
NetWorker lowers your TCO by simplifying management of your entire backup infrastructure—and accelerates ROI by delivering seamless integration with EMC's comprehensive backup and recovery solution portfolio.
- 4 Your IT environment is big, mixed, spread-out, and growing.**
NetWorker supports a broad set of operating systems, databases, applications, storage, and topologies to help you control costs by bringing management and reporting of your entire information protection environment into one central solution.
- 5 You're ready for deduplication.**
NetWorker helps you adopt and blend deduplication data protection capabilities with traditional backup—to significantly reduce backup times, store more data on disk for longer and efficiently replicate data to disaster recovery sites. NetWorker is the only backup software application to provide seamless integration with the industry's two leading deduplication solutions —EMC Avamar® and EMC Data Domain®. And with a common management interface you can optimize your backup environment without adding administrative complexity.
- 6 You're going virtual.**
NetWorker delivers industry-leading capabilities for protection of virtual servers. Deduplication and off-host backup options reduce the impact of backup on virtual hosts. Auto-discovery and visualization of VMware® environments ensures VMs are protected. And VSS-based backup for Microsoft® Hyper-V® delivers complete and consistent protection.
- 7 Applications drive your business.**
NetWorker integrates with the applications that are central to operating your business including Microsoft SharePoint®, Exchange, and SQL Server®; SAP, Oracle, DB2, Lotus Notes, Informix, Sybase, and the EMC Documentum® family. NetWorker ensures complete protection with disaster and granular recovery options to help you meet your most demanding service levels.
- 8 You want it your way.**
Build your own single-pane view of backup operations with a customizable management interface and docking panels. With NetWorker you can choose what matters most—and view it all from one place on your desktop.
- 9 Some things are complicated. Your backup software shouldn't be one of them.**
Get simple point-and-click control of your entire backup and recovery environment—from a single point—with NetWorker's web-based user interface. Wizard-driven configuration simplifies setup and ongoing management. And automated updates streamline upgrades.
- 10 Your last backup vendor let you down.**
Integrated software and hardware solutions from EMC deliver unmatched reliability and efficiency. All EMC solutions are backed by the world's leading services and support organization to help you quickly and proactively resolve issues and questions. EMC support includes more than 4,900 technical experts with more than 35 strategically located support centers—delivering “follow-the-sun” support in over 75 countries.
